

Fox Food: Rabbit Alert

An animal that other animals eat must be very alert. It must look and listen for signs of danger. It also can smell danger – it can tell the scent of a predator.

There are many animals that hunt and eat rabbits. Which of the following clues would tell a rabbit that it should protect itself? Put an X in front of the clues that tell danger is nearby. If you don't put an X, explain why in the space below that clue.

___ The sound of hooves running

___ A whistle from a robin

___ The smell of a fox

___ A smell of a goat

___ A large brown paw behind a bush

___ A scared mouse rushing by

Now tell how the rabbit might protect itself from its predators. Show or describe four different ways it could protect itself.
