

Rabbit Alert

DePaul Center for Urban Education □ 1993

An animal that many other animals eat must be very alert. It must look and listen for signs of danger. It also can smell danger--it can tell the scent of a predator. There are many animals that hunt and eat rabbits. Which of the following clues would tell a rabbit that it should protect itself? Put an X in front of the clues that tell danger is nearby. If you don't put an X, explain why in the space below that clue.

_____ the sound of hooves running

_____ the smell of a fox

_____ a large brown paw behind a bush

_____ a whistle from a robin

_____ a butterfly flying by

How could a rabbit protect itself from its predators?
Show or describe four different ways it could protect itself.

Make another animal alert page. Choose a different animal. Set up the page just like this one and then do it yourself.
