Dear Mayor Dayley:

How much power do schools use?  
If we solar powered all the schools in Chicago how much electricity would we save?

I will make some suggestions for how to create solar powered schools. You will need a lot of money to make it work, but it will be worth it in the future. If you do my suggestion, it will take time to build and make it work. To build it, you will need to buy the solar pannels, find someone to install them, and someone to wire it.

After you make the schools solar powered, Chicago will be a different place. It will use less pollution and power. If we do solar powered schools we will be earth friendlier and the first schools to be solar powered.

Chicago is the 3<sup>rd</sup> largest school district. There are over 600 schools in Chicago. If we solar powered all the schools in Chicago it would be better for the environment and it will slow down climate change. Mayor Dayley, think how much it will help the environment if we solar powered over 600 schools! Thank you for your consideration.

Sincerely,
