

Dear Mayor Daley,

We are running out of energy in Chicago. I've got a way to make more, wind turbines. I have done a project on wind turbines so I know about this.

There are many different types of wind turbines. Some go in water and some can go over highways. We can put wind turbines over our highways. It would not look ugly and it would create some electricity with an inexpensive natural resource.

The generators on wind turbines cost a lot of money. And the tools do too. We could get the money from tax.

From toys and stuff. That could probably give you enough money to make a few wind turbines.

For the ones in water we would get builders and put a few wind turbines on Lake Michigan. There they would produce more in water than on land. The lake is windier which would produce more energy for the city.

This is a good way for Chicago to get more energy and be green. I hope you can put a few around Chicago. Thanks for your cooperation.
