

May 12, 2009

Dear Mayor Daley,

I have an idea I really want to share with you. It's about solar panels. I

happen to notice that Reilly school was the first school to have solar panel, in fact

Reilly still has solar panels on the school! I think all schools should have

solar panels on them because it causes less pollution. And some kids do have asthma by the air pollution that could cause death

Not only schools but also cars, cellphones, houses, and computers could be ran on solar energy.

One other reason I would like to have solar panels is because we are wasting too much electricity. I notice cities including

Chicago have a problem with controlling their electricity. Why use electricity when

you can use energy from the sun. Don't worry on non sunny days solar panels save energy

for you to cook for your family, take a shower, watch television, and stay warm for your good night

sleep. Mayor Daley, you are a smart man and

Solar panels are the smart way to go.

Sincerely,
